

Centre name: Kindy Korner Children’s Services

Project name: Waste Reduction

**Why:** We recognise our actions can make a difference. We would like to share this with the other staff and families at our centre. Our centre generates waste which can be redirected away from landfill.

**How:** Eco Wall will be set up with sustainability information, resources and actions to take every day with young children. Educators and children will investigate and experiment with their ideas and the results will also be shared on the Eco Wall.

Established vegetable gardens to demonstrate how our waste can be used to help grow our food.

**Outcome:** The Eco Wall was a successful tool for sharing environmental information as it was updated regularly and included sustainable actions the children were involved in. It linked the sustainable message to the actions being taken at the centre. The Eco Wall was also used to highlight Eco Events and encouraged families to participate for example National Tree Day.

The veggie garden generated much interest.
